Art through the Ages

Discovering Gifted Artists through the Ages! Take a color-filled trip through time as we discover how truly masterful artists communicated through their art, the magnificent techniques they employed, and how and why those art forms changed over time. We will take a close look at the artists themselves as well as the art they created. Together we will try our hand at creating our own masterpieces in a wide variety of styles and mediums!

Brain Brigade

Skin, nails, teeth, ears, muscles, and hair... As different as these may be from person to person, humans all have a lot of things in common. Have you ever wondered what holds all of us together and what goes on underneath the surface? We will study body systems and processes; create models of skin layers and the human heart and lungs. We will use a black light to test how germs are spread and learn many more fun facts about how our body systems work. Biology Brigade is for anyone interested in the medical industry, general science and/or the human body.

Bubbleology

Bubbles are fascinating to play with! Bubbles also demonstrate science phenomena such as aerodynamics, chemical compositions, and surface tension. Students will develop a variety of science skills experimenting, measuring and reporting data, and drawing conclusions. We will make cubic bubbles, gigantic bubbles, and lots of art! Incoming first and second graders get ready for some clean fun in Bubbleology!

Tall Tales & Funny Fables

Come experience a summer of stories galore in Tall Tales and Funny Fables. Learn the origin of these outrageous stories and fill your creative spirit by acting out tales, completing crafts and other funtivities, and participating in a variety of STEM challenges. You will even have a chance to spin a tale of your own! Book it over to Phelps and make your summer a page-turner in Tall Tales and Funny Fables!
